

Organizer Fixtures Guide

This guide explains, in a simple human way, how organizers should use the Manage Matches dashboard to create fixtures, update final scores, postpone games, cancel matches, and keep the tournament website accurate.

Core idea: create a fixture once, then update the same match later by using the same Match ID.

What Every Field Means

- Match ID: a unique number for one match. Reuse it later when updating that same match.
- Status: scheduled before kickoff, played after full time, postponed if delayed, cancelled if removed.
- Match Date: the day the game should happen.
- Match Time: the kickoff time.
- Home Team Number: the team number of the home side.
- Away Team Number: the team number of the away side.
- Referee ID: optional if you manage referees in the system.
- Home Goals and Away Goals: keep them at 0 before the game is played, then update them with the final result.

How To Create A New Fixture

- Open Manage Matches in the Organizer Control Panel.
- Choose a new Match ID that is not already used.
- Set Status to scheduled.
- Enter the Match Date and Match Time.
- Enter the Home Team Number and Away Team Number.
- Leave Home Goals and Away Goals at 0 before kickoff.
- Click Save Match.

Example

Example fixture:

Match ID: 1001

Status: scheduled

Match Date: 2026-04-02

Match Time: 18:00

Home Team Number: 3

Away Team Number: 5

Home Goals: 0

Away Goals: 0

How To Update A Played Match

- Use the same Match ID as the original fixture.
- Change Status to played.
- Enter the final Home Goals.
- Enter the final Away Goals.
- Click Save Match again.
- This updates the fixture and affects the League Table.

Example

Example result update:

Match ID: 1001

Status: played

Home Goals: 2

Away Goals: 1

Special Cases

- Postponed: use the same Match ID and set Status to postponed.
- Cancelled: use the same Match ID and set Status to cancelled.
- Delete Match: if the record itself is wrong, use Delete Match ID and click Delete Match.

After Saving A Played Match

- Open Manage Player Stats and add the goals, assists, yellow cards, red cards, and clean sheets for the players involved.
- Refresh the dashboard and check Fixtures, League Table, Top Scorers, Top Assists, and Clean Sheets.
- If something looks wrong, verify the team number, jersey number, and match ID first.

Common Mistakes To Avoid

- Do not create a second match if the fixture already exists. Update the first one instead.
- Do not use the wrong team number. A wrong number attaches the fixture to the wrong club.
- Do not forget to change Status to played after full time, otherwise the table will not

update.

- Do not enter player stats before the match exists in Manage Matches.

Simple Matchday Routine

- Before kickoff: create the fixture and make sure it is marked as scheduled.
- After full time: update the same match to played, enter the final score, then add player stats.
- End of day: review the dashboard and confirm the highlights and league table match the real games.
